

Introducing the
DICK SMITH

WIZARD

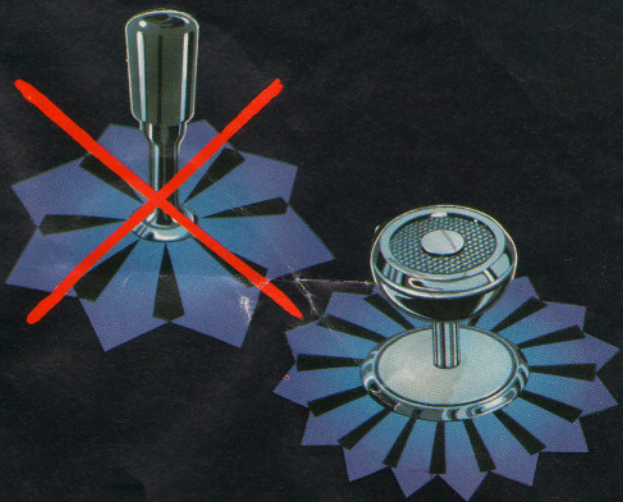

It had to happen...
a video entertainment computer which
goes far beyond anything you've ever
seen before...

...at an incredibly low price!

space age hand controllers

Here's another incredible advantage of the Dick Smith Wizzard: most video game controllers have only eight possible movements. Instead of a pair of simple 'sticks' the Wizzard comes with special guiding devices, with 16 – yes, 16 different positions available, plus up to 48 keys which can also be used. So if any program cartridge requires close control (for greater excitement!) the Wizzard controller can allow far greater manoeuvrability. And even more: the Wizzard features slide-in keyboard overlays. No more searching through instruction manuals to find which button to press. It's all there – right in your hand! When not in use, the controllers store neatly in the main console unit: sitting side-by-side to form a keyboard. But more about that in a moment!

And it even plays tunes!

Yes – every game features its own tunes and the most fantastic sound effects – made possible by the Wizzard's four different sound outputs. Complex sounds and chords are easy for the Wizzard – but not possible with many other games.

Look at this state-of-the-art technology!

Professional quality double-sided fibreglass printed circuit board with plated through holes. One board construction means virtually nil internal wiring; with less to go wrong!

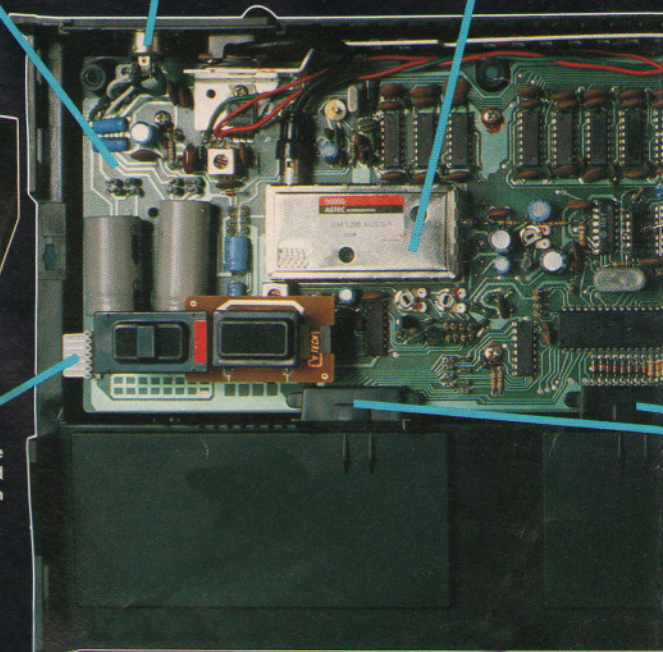

Standard DIN connector for external plug pack supply connection (keeps bulky and weighty transformer out of the Wizzard case!) plus long 2.6m co-axial cable for connection to your TV set (fitted with standard plug).

Inbuilt professional quality television modulator, already set up and aligned to give you instant picture on any PAL (Australian) standard VHF television receiver.

This special matching cassette recorder and interface is now in final design stage. With it, you'll be able to play pre-recorded programs into your computer from cassette, and also save your own programs onto cassette for later use. Watch our ads for details of availability.

Inbuilt socket ready for cassette expansion: you'll be able to load and store programs direct from cassette.

And the most brilliant feature of all... An in-built personal computer

Possibly the most fantastic feature of all: you can turn the Dick Smith Wizzard into your own personal computer – in an instant – simply by plugging in the optional low-cost computer cartridge.

Just think: the Wizzard is not just another TV game. You'll also be able to learn how to write your own programs...home economics...financial records...recipes...school work...You could even program and run your own games!

No other video game offers you this incredible option: because no other video game can! It's all made possible by the incredibly powerful 6502 microprocessor used in the Dick Smith Wizzard (exactly the same one as used in the world famous Apple computer and that costs over \$1000!)

The least expensive similar computer on the market is the excellent VIC 20 colour computer – and this costs over \$500 with around 13K of memory!

And have a close look at the remarkable hand controllers: you'll find each has 24 different keys (as well as the NASA-type joystick controllers).

When the two controllers are placed side-by-side in the main console: PRESTO – a unique splashproof keyboard, with the world standard QWERTY typewriter layout.

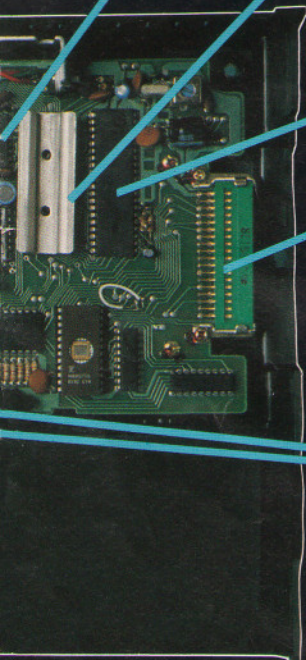

Eight 4116 integrated circuits giving a massive 16K of inbuilt random access memory (RAM), for storing and working with programs within the Wizzard: no external memory needed!

Specially designed large scale integrated circuit controlling all the colour and video information: this single IC replaces at least a dozen in earlier designs!

World-famous 6502 microprocessor IC (the same IC as used in the \$1000+ Apple Computer) to give unbelievable data handling capability to a machine like the Wizzard.

Quality secured edge connector for the plug-in games cartridges, which will also allow later expansion facilities (currently under development). Long-life double contact connectors ensure perfect connection to every cartridge.

Specially designed 'captive' sockets to firmly hold the Wizzard's plug-in hand controllers: they're instantly removable for service.

A SPECIAL NOTE FOR PARENTS

It has taken me years to find this unit: a fantastic video game with a full educational computer built-in. You've probably thought of the Atari & Intellivision and so many of the other units available on the market.

Now there is the ultimate alternative

The world's most fantastic...
an in-built computer – and you...
\$200 (40%) on many compar...

**SAVE OVER
\$200!**

And a superb manual from Australia's father of small computers

The manual for the Dick Smith Wizzard has been written by Jamieson Rowe, BA, BSc, who developed the first small computer for production in Australia. Written in easy-to-understand language, this manual shows you how to program the computer yourself – in BASIC computer language.

This Manual comes FREE with the BASIC programming cartridge!

See how they compare

Price *	\$348	\$684	\$607	\$689

* Price of least expensive version with at least 16K RAM, BASIC interpreter, game cartridge and hand controllers for use via a standard TV set.

Fantastic serviceability and robust design

The Wizzard has been especially designed for the type of punishment kids can hand out to TV games. They tug at the hand controllers... they spill things on them... they knock them about. All the electronics in the Wizzard are on one single printed circuit board – almost eliminating internal wiring (one of the main areas of trouble in some machines). And the hand controllers not only have spill-proof keypads, they also feature quick-connect plugs for easier service – should ever be required. You don't have to send your whole unit away for service just because one hand controller develops a fault: and you can still play most games with one controller!

Unbelievable bargain price

The only comparable computer system in the world costs over \$200 more than the Dick Smith Wizzard. The Wizzard sells for an amazingly low \$348. With all its amazing features, you'd expect to pay much, much more for a machine as versatile as this!

but why so low?

Contrary to what you might expect, the state-of-the-art technology of the Dick Smith Wizzard actually costs less than previous models. How is this possible?

Remember the first electronic calculators: very crude, and cost a fortune. These days tiny pocket sized calculators using the very latest in technology cost just a few dollars and are far better. It's just the same with computer TV games. Earlier models were much more expensive, but not as good. As technology advances, the cost lowers, and the machine improves dramatically. The Dick Smith Wizzard is the result.

**free game cartridge
worth \$39.95**

As a special introductory offer, we're offering you your first games cartridge at no extra charge! That's right, we were going to sell it for the normal retail price of \$39.95, however we've decided to include it absolutely FREE OF CHARGE in the first shipment of Dick Smith Wizzards. But remember, this offer is strictly limited – and we're sure the first shipment will be sold out very, very quickly!

DICK SMITH
WIZZARD
ONLY

ONLY

\$295

Ready-to-use – includes console, hand controllers, approved power supply and FREE game cartridge!

ONLY \$39.95

Your choice of 6 cartridges now (see over) with many more to come shortly.

BASIC CARTRIDGE *
ONLY \$69.50

Turns your Wizzard into a computer – includes FREE the special programming manual – normally \$9.95 extra!

* UNDER DEVELOPMENT
AVAILABLE SHORTLY.

here's why it's so much better

A brand new design

The Dick Smith Wizzard uses the very latest technology available. Most of the games around were designed two, three or even more years ago. And at the speed electronics is advancing today that's a long, long time. The design of the Dick Smith Wizzard is absolutely up-to-date: it was finalised only a few short months ago. It is therefore far more advanced than older machines.

Incredible picture quality

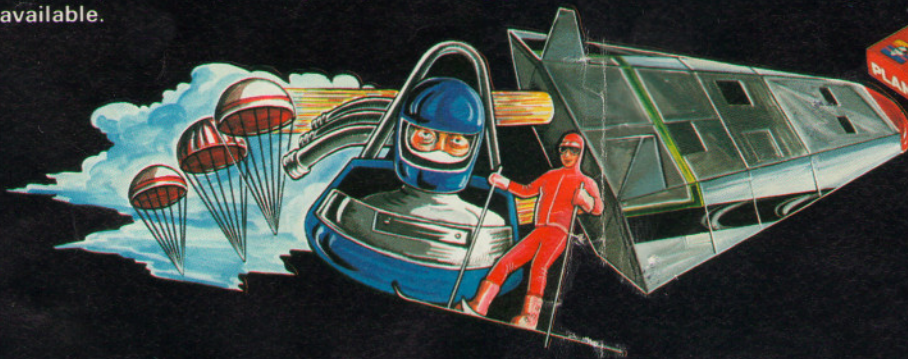

The Dick Smith Wizzard has really outstanding picture quality! It's resolution (49,128 pixels) is far greater than the most popular game on the market. The result: a fantastically better picture! And this means far better games and far more enjoyment. Just compare the Wizzard beside any other game and you'll be amazed. Forget about those 'stick men' you've seen before: with the Wizzard you get real 'three dimensional' figures. Even the signs around the tennis court come alive. It's so realistic! Have a look at the colours, the complexity of the screen pictures overleaf. They're almost like the screens NASA use in the space shuttle – they're that good!

The fantastic games cartridges

Every one a winner with the whole family. The Wizzard is so advanced you can play up to 32 games per cartridge...one player, two players, amateur, professional standard...you choose yourself. So it's also impossible to play the same game twice.

The most popular video games sell on average about six cartridges per machine. Well, we have over 12 of the most popular cartridges available NOW – and more coming all the time. So you'll always have plenty of exciting games available.

Automatic games feature!

The Wizzard's brilliant design engineers have found that normal instructions are not completely adequate. So advanced are the Wizzard cartridges that each one actually contains a special demonstration program to show you how the game is played: right there in front of you. No other game we know of has this outstanding feature!

Look at these incredible games...

Planet defender Y-1650 Unbelievable realism, incredible action. Only the best survive. They'll be trying to get you from every angle possible - and a few impossible!

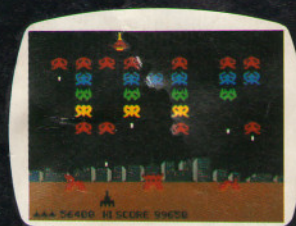

Tank Attack Y-1610 You're a tank commander locked in deadly battle. You've really got to have your wits about you to play this one!

Auto Chase Y-1630 The old time car chases take on a new meaning - when you're in the driver's seat! And there are extra hazards at every turn. Watch it!

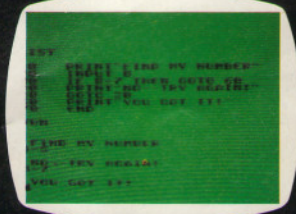

Air-Sea Attack Y-1660 Get a load of the incredible graphics! And that's only he start. If you like action and plenty of it, put yourself in the commanders seat of this one!

FREE! A free Sonic Invaders cartridge supplied with every Wizzard! Now with added features, more exciting to play.

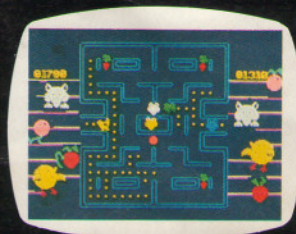

Tennis Y-1620 With real 3D figures. All the fun and excitement of the Grand-Slam tournaments - with real tennis scores, rules, etc.

BASIC Y-1605 The Wizzard is a computer as well - just plug in the computer cartridge and you're ready to start programming in 'BASIC' language.

COMING SOON: A great new range of games (currently in design). Grab some of the excitement of downhill Skiing (Cat Y-1670 - available shortly). Or Police Jump. Or Pinball. And many others. Ask for details at your nearest Dick Smith store.

ALSO COMING SOON: POLICE JUMP & PINBALL
