"CREATIVISION" home entertainment and personal computing system is a computer-based system that brings creative games, entertainment, education and personal information processing into your family.

**When used as a HOME ENTERTAINMENT SYSTEM/TV GAME:**

Supplied with the main unit is a game program used for game playing purpose. Game programs of different interests are being developed which provide choices for optional purchase now and in the future.

**When operated as a PERSONAL COMPUTING SYSTEM/HOME COMPUTER:**

One important feature of this unit is its capability to expand to a personal computer simply by insertion of the "CREATIVISION BASIC ROM PROGRAM" (To be supplied as optional extra); no other accessories are necessary. Already built-in the main unit are: 16k bytes of dynamic random access memory, 1k bytes of static random access memory and a 48-key alpha/numeric electronic keyboard; these will be adequate for data processing. Further expandability will be made possible by the following optional extra purchase:- "CREATIVISION CASSETTE INTERFACE" for massive program storage, "CREATIVISION MEMORY MODULE" for more memory capacity.

## HOME ENTERTAINMENT AND PERSONAL COMPUTING SYSTEM

- Computerized on-screen scoring
- Difficulty options
- Brilliant color on color TV's
- Simulated sound effects

A vintage Atari 2600 console is shown from a top-down perspective. It has a dark grey or black plastic casing. Two joystick ports are visible on the left side, each with a black joystick. The center of the console features a custom keyboard with two rows of keys. The top row has 16 keys, and the bottom row has 16 keys. The keys are white with black lettering. The console is resting on a dark, textured surface. A small, rectangular, light-colored object is visible on the right side of the console.
